DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-30, drawn to a method of inhibiting a viral infection in a mammal via administration of a fusion molecule, scFv-Fc.

Group II, claim(s) 31-84, drawn to scFv-Fc molecule and related compositions and host cells.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the claimed invention is not free of the prior art. Moulard (2002-cited) describes a human Ab, X5, that binds to gp120 and such binding results in neutralization of a broad range of HIV-1 isolates. The author further describes the roles of co-receptors CCR5 and teaches neutralization of multiple isolates from different clades. Thus, no special technical feature exists for the Groups I and II as defined by PCT Rule 13.2, because it does not define a contribution over the prior art. Because the technical feature is not a special technical feature, unity of invention is lacking.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

The sequences set forth by SEQ ID NO: 1-18.

Applicant is required, in reply to this action, to elect a **single** species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Claims 1-84

The following claim(s) are generic: all claims are generic with respect to a specific molecule (claims 1-84).

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Different oligodeoxynucleotides which have different structural conformations have distinct functional effects.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
